DEPENDENT SCHOLARSHIP MANAGEMENT

Traditionally, scholarship management has been a highly manual process involving multiple stakeholders and entities, which can be time-consuming, error-prone, and resource-intensive. Tyler's Dependent Scholarship Management application offers an automated, platform-based solution that significantly simplifies this process, reducing operational complexity while improving communication, tracking, and reporting.

Streamline Scholarship Management

The Dependent Scholarship Management application, built on Tyler's Application Platform, empowers states, agencies, and educational institutions to manage scholarships for dependents seamlessly. The solution automates key tasks such as scholarship applications, processing, invoicing, and communication. It supports complex workflows with multiple contributors—students, parents, schools, and others—ensuring that all parties have access to right information. The mobile-friendly application also enables dependents to apply easily from any device, reducing the reliance on paper applications and improving accessibility for all users.

Easing Scholarship Administration Challenges

Dependent Scholarship Management greatly reduces the administrative burden associated with managing dependent scholarships. The application automates eligibility verification, communication, and invoicing. These features minimize human error and reduce manual workload. With built-in tracking of scholarship usage by semester and the ability to transfer scholarships between public schools within the state, the solution provides a comprehensive approach to scholarship management. This ease of use enables administrators and staff to focus on serving their communities without getting bogged down by administrative tasks.

Tailored to State Requirements

The Dependent Scholarship Management application is highly configurable to meet the unique needs of the state. Whether it's managing multiple types of scholarships, coordinating between various entities, or tracking detailed scholarship usage across institutions, the solution is designed to support the specific legislative and procedural requirements of each scholarship program.

> **The Dependent Scholarship Management application is built on Tyler's Application Platform. The Platform is designed using open standards, open architecture, and platform independence, offering extensibility, interoperability, and portability to organizations of all sizes. In-house developers can fine-tune the Dependent Scholarship Management application to accommodate unique requirements, dramatically reducing both implementation time and cost.**

Data-Driven Insights for Better Decision Making

The application comes equipped with robust reporting capabilities, providing administrators with powerful insights into scholarship management. Key metrics include:

- Number of applications processed

- Total scholarships awarded

- Communications sent to students and parents

- Transfer of scholarships between schools

- Scholarship usage by year, semester, and more

These insights are essential for tracking performance, ensuring compliance, and improving decision-making processes, all while meeting the reporting and accountability needs of the state, agencies, and educational institutions.

Additional Benefits

- **Simplified Application Processing:** Automates and reduces the workload involved in managing scholarship applications, making the process faster and more efficient for both applicants and administrators.

- **Improved Coordination:** Facilitates better communication and coordination between students, parents, schools, and others, ensuring everyone is on the same page and reducing delays.

- **Better Financial Management:** Automated invoicing based on scholarship usage ensures that educational institutions are paid accurately, reducing the need for manual intervention and increasing transparency.

- **Operational Efficiency:** By automating time-consuming tasks, the solution allows agencies and schools to reallocate resources to more critical functions.

Dependent Scholarship Management, built on Tyler's Application Platform, has all the benefits of a custom-built application but at an off-the-shelf price. Dependent Scholarship Management can be configured in a fraction of the time and at a lower cost required for custom software development or traditional implementations.
