

Identify Threats Before They Become a Breach

Empowering organizations to avoid the catastrophic impact of a network breach, Tyler Technologies' Managed Detection & Response is a 24/7 solution that analyzes, detects, and informs organizations of viable cyberthreats spanning from internal and external networks to perimeter endpoints.

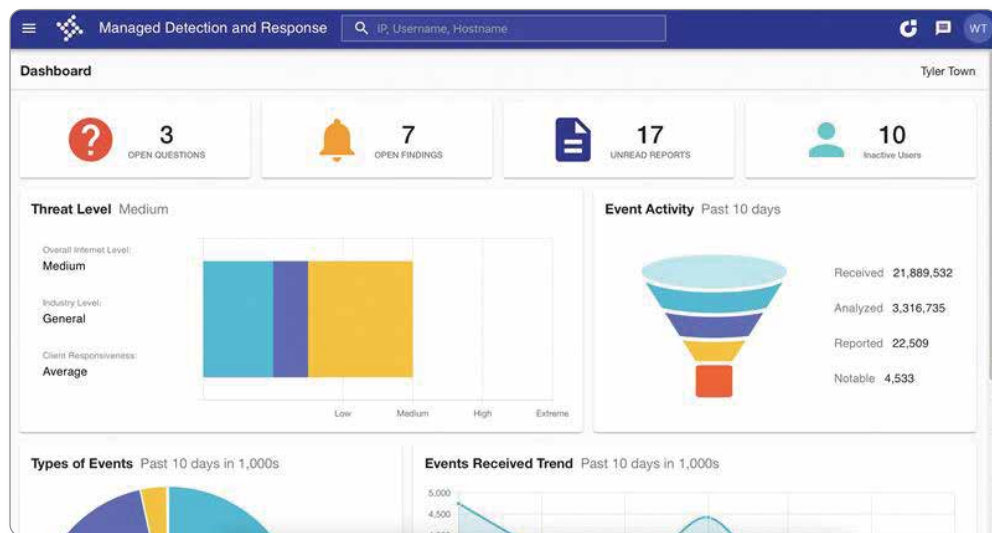

Tyler's Cybersecurity Services analysts, supported by artificial intelligence and machine learning, identify and alert clients of serious threats with agility and precision.

Managed Detection & Response can meet your cybersecurity needs with:

Real-Time Alerts

You are immediately contacted if you are actively at risk. Capabilities include:

- Customized alerts for security events and administrative changes on endpoints, cloud Infrastructure, active directory, and more
- Identification and confirmation of unique and suspicious activity
- Detailed occurrence notifications are sent immediately
- Request-authorization capability to disable infected Windows and Mac endpoints to mitigate suspicious activity
- Opportunity to schedule an annual leadership meeting

Interactive dashboards simplify reviewing and responding to Managed Detection & Response findings.

Reporting

Cybersecurity analysts prepare client-specific daily network traffic summaries. Capabilities include:

- 24-hour critical log data reports covering the entire network infrastructure
- Secure and documented audit trail for compliance
- Monthly threat and findings management reports

Secure Online Portal

You have insight into all your network traffic online 24/7. Through the portal you can:

- Search and filter report data with customizable reporting
- Access and review threat intelligence
- Review and respond to findings with interactive dashboards

Proactive Cybersecurity

Managed Detection & Response helps keep you safe from:

- Malware
- Suspicious activity
- Zero-day exploits
- Compromised email accounts
- Ransomware
- Errant administrative activity
